

# SignLits™ Rechargeable Car Top Signs

Is *Your* Sign Lit?

Tips for using your new cordless car signs...

- The average battery charge will last about 11 hours.
- Once unplugged from the charger your SignLit™ unit may take a few minutes to turn on.
- The photocell on your SignLit™ unit reacts to sunlight. The sign may be lit in the store when off the charger.
- SignLits™ have been tested to 5° F. In periods of cold weather, the battery will last about 8 hours. This is normal. Switch out the cold sign for a warm one and leave the sign off the charger until the end of the night (see below).
- Having trouble charging your cordless sign? Check the plug end that's molded into the sign. If you have to "wiggle" the charger cord to get the lights to turn off, this is likely the problem. These are called "pigtailed" and can be purchased from us or your sign supplier.
- Do not put signs with the old corded light systems on the charger. It will drain the batteries and may damage the SignLit™ unit.
- Any sign that is used during the day should stay off the charger until the end of the night. Plug the signs into the charger together at the end of the night. This will prolong battery life.
